## **DETAILED ACTION**

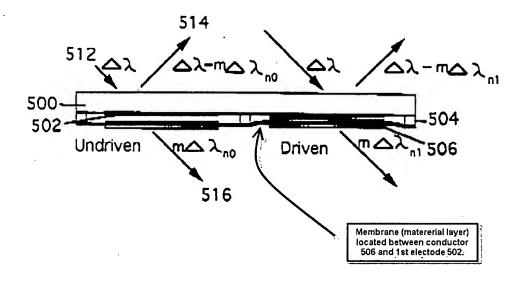

## Response to Arguments

Applicant's arguments filed 5/16/2006 have been fully considered but they are not persuasive.

The applicant's representative argues that Miles (US 5,835,255) does not disclose partially reflective and transmissible electrodes. As shown in figure 21A Miles discloses that layer 500 is a transparent substrate (therefore negligible reflectance from substrate). The reflection and transmission lines 514 and 516 inherently show that first and second electrodes both are reflective and transmissive.

Also in regards to the argument to Miles not disclosing a material layer between the conductor layer and the first electrode. It is clearly depicted by Miles in Fig. 21 that membrane support layer (which is a material layer) is between a first and second electrode (502 & 506). This added limitation to the currently amended claims does not over come the prior art as disclosed by Miles.

Art Unit: 2823

Allowable Subject Matter

Claims 4, 7,10, 13, 16, 17-19 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

The primary reason the indication of allowable subject matter is the limitation of a spacer on the side wall of the seconded electrode. The prior art does not teach the formation of a spacer on the sidewall of the second electrode. This limitation in combination with all other limitations included in the independent claim, make a clear distinction from the searched and cited prior art.

Art Unit: 2823

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim1, 2, 3, 5, 6, 11, 12, 14, 15, 29, 24 - 28, 31, 32, 36 and 37 are rejected under 35 U.S.C. 102(b) as being anticipated by Miles (US 5,835,3255).

Regarding claims 1 and 27, Miles discloses a structure of a micro electro mechanical system, suitable to use on an optical interference display cell, the structure of a micro electro mechanical system comprising:

a first electrode that is partially transmissible and partially reflective; (Miles, Fig. 21A - [502], Fig. 27)

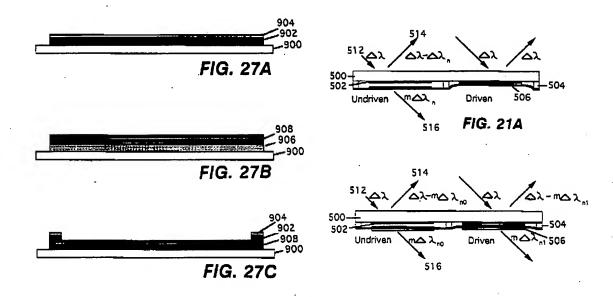

a second electrode that is reflective comprising: (Miles, Fig. 21A - [506], & Fig. 27)

a first material layer; and (<u>Miles</u>, Fig. 2A – see response to argument above)
a conductor layer set on the first material layer and approximately in
parallel to the first electrode wherein the first material layer is positioned between
the conductor layer and the first electrode; and (<u>Miles</u>, Fig. 21A - [502])

a supporter configured to separate the first electrode and the first material layer to form a cavity; (Miles, Fig. 21A - [504])

Art Unit: 2823

(Miles, Col. 20 lines 55-57 → 900 is symbolizes both the support membrane & conductor/electrode [506] and the substrate [500] & conductor/electrode shown in Fig. 21)

Regarding claim 2, 24, 25, 28, 36, the claims cited are given no patentable weight. Product-By-Process claims are not limited to the manipulations of the recited steps, only the structure implied by the steps.

"Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985) (citations omitted) (Claim was directed to a novolac color developer. The process of making the developer

Art Unit: 2823

was allowed. The difference between the inventive process and the prior art was the addition of metal oxide and carboxylic acid as separate ingredients instead of adding the more expensive pre-reacted metal carboxylate. The product-by-process claim was rejected because the end product, in both the prior art and the allowed process, ends up containing metal carboxylate. The fact that the metal carboxylate is not directly added, but is instead produced in-situ does not change the end product.).

Also regarding claim 24, 36, Miles teaches using a photoresist. Using a photoresist is standard practice in the art.

Also regarding claim 25, Miles teaches using ITO for the conducting layers.

(Miles, col. 21 line 13 → ITO)

Regarding claim 3, Miles discloses the structure of a micro electro mechanical system of claim 1, further comprising a second material layer covering the second electrode. (Miles, Fig. 27A - [904])

Regarding claim 5,11, 29, 31, Miles discloses the structure of a micro electro mechanical system of claim 1, wherein the material of the first material layer is selected from the group consisting of silicon material, dielectric material, transparent conductor material, cromolecule polymer, metal oxide and any arbitrary combination thereof. (Miles, col. 19 line 58 → silicon nitride)

Art Unit: 2823

Regarding claim 6,12, Miles discloses the structure of a micro electro mechanical system of claim 3, wherein the material of the second material layer is selected from the group consisting of silicon material, dielectric material, transparent conductor material, macromolecule polymer, metal oxide and any arbitrary combination thereof. (Miles, Fig. 27A - [904] → insulator)

Regarding claim 14, <u>Miles</u> discloses the structure of a micro electro mechanical system of claim 5, wherein the transparent conductor material is indium tin oxide, indium zinc oxide, or indium oxide. (<u>Miles</u>, col. 21 line 13 → ITO)

Regarding claim 15, 32, <u>Miles</u> discloses the structure of a micro electro mechanical system of claim 6, wherein the transparent conductor material is indium tin oxide, indium zinc oxide, or indium oxide. (<u>Miles</u>, col. 21 line 13 → ITO)

Regarding claim 26 and 37, Miles discloses the structure of a micro electro mechanical system of claim 1 & 27, wherein the second electrode is a movable electrode.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2823

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 8, 9, 30, 34, and 35 rejected under 35 U.S.C. 103(a) as being unpatentable over Miles (US 5,835,3255) in view of Gotoh et al. (US 5,824,608).

Regarding claim 8,9, 20-23, 30, 34, 35, Miles discloses The structure of a micro electro mechanical system of claim 5,

Miles does not expressly disclose wherein the silicon material is polysilicon or amorphous silicon.

Gotoh discloses wherein the silicon material is poly-silicon.

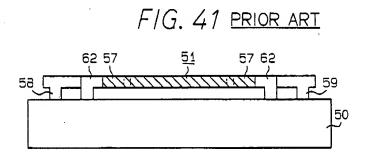

The References are analogous art because they are from the same field of endeavor, which is making a movable electrode.

Art Unit: 2823

At the time of the invention, it would have been obvious to a person of ordinary skill in the art to use polysilicon as a support membrane.

Therefore, it would have been obvious to combine the two references to obtain the invention as specified.

A movable portion 51 of a beam structure is disposed above a silicon substrate 50 with a prescribed gap therebetween. The movable portion 51 of a <u>polysilicon</u> thin film comprises beam portions 52, 53, 54 and 55, weight portion 56 and <u>movable electrode</u> portions 57. (<u>Gotoh, Col. 1</u>, lines 32-37)

Regarding claims 20 – 23, 34, 35, It would have been obvious to one of ordinary skill in the art of making semiconductor devices to determine the workable or optimal value for the layer thicknesses through routine experimentation and optimization to obtain optimal or desired device performance because the layer thicknesses is a result-effective variable and there is no evidence indicating that it is critical or produces any unexpected results and it has been held that it is not inventive to discover the

Art Unit: 2823

optimum or workable ranges of a result-effective variable within given prior art conditions by routine experimentation. See MPEP 2144.05

Given the teaching of the references, it would have been obvious to determine the optimum thickness, temperature as well as condition of delivery of the layers involved. See In re Aller, Lacey and Hall (10 USPQ 233-237) "It is not inventive to discover optimum or workable ranges by routine experimentation." Note that the specification contains no disclosure of either the critical nature of the claimed ranges or any unexpected results arising therefrom. Where patentability is said to be based upon particular chosen dimensions or upon another variable recited in a claim, the Applicant must show that the chosen dimensions are critical. In re Woodruff, 919 f.2d 1575, 1578, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990).

Any differences in the claimed invention and the prior art may be expected to result in some differences in properties. The issue is whether the properties differ to such an extent that the difference is really unexpected. In re Merck & Co., 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

Appellants have the burden of explaining the data in any declaration they proffer as evidence of non-obviousness. Ex parte Ishizaka, 24 USPQ2d 1621, 1624 (Bd. Pat. App. & Inter. 1992).

An Affidavit or declaration under 37 CFR 1.132 must compare the claimed subject matter with the closest prior art to be effective to rebut a prima facie case of obviousness. In re Burckel, 592 F.2d 1175, 201 USPQ 67 (CCPA 1979).

Page 11

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jarrett J. Stark whose telephone number is (571) 272-6005. The examiner can normally be reached on Monday - Thursday 7:00AM - 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew Smith can be reached on (571) 272-1907. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
